TATE LE

APPLICATION DEVELOPER

402-525-6047 – LINCOLN, NE
TATELE111@GMAIL.COM - GITHUB.COM/TATELE100

ABOUT ME

I'm a C#/.NET developer with the State of Nebraska, building internal web apps with ASP.NET Core, Entity Framework, and SQL. Outside of work, I'm building full-stack projects with React to grow as a developer. I'm an outgoing person who loves basketball, working out, and spending time with family and friends, and I've recently picked up golf, which has taught me a lot about patience.

SKILLS & ABILITIES

Skilled in C#, ASP.NET Core/MVC, Blazor, Entity Framework Core, and SQL Server, with experience building internal web applications from the database up. Comfortable debugging production issues and turning business requirements into working features. Growing into full stack development with React and Next.Js through personal projects

EXPERIENCE

2024-Current

Application Developer
State of Nebraska – Department of Health and Human Services

- Responsible for designing, coding, and maintaining programs.
- Design Razor and Bootstrap interfaces that follow agency UI standards and make internal tools easier for staff to use.
- Diagnose and fix application issues, often tracing problems across the database, backend, and UI.

2021-2024

Host/Server
Vung Tau Pho Grill Restaurant

- Responsible for taking orders and cleaning in a timely manner.
- Provided exceptional customer service by attentively listening to guest needs and promptly addressing any concerns.
- Answered customers questions about hours, seating, and menu information.

EDUCATION

May 2024

AAS: Computer Information Technology – Application Development
Southeast Community College - Lincoln, Ne

Associate of Applied Science in Computer Information Technology – Application Development, with a strong foundation in software development principles and practical technology skills.

PROJECTS

Reactivities

Full-stack social app where users create and manage activities, maintain accounts, and connect through friend requests. Built with a React and Material UI frontend and a C# ASP.NET Core backend using Clean Architecture.

Journal App

Full-stack journaling app with entry dates, mood tracking, and full CRUD functionality. Built with a Next.js frontend and an ASP.NET Core Web API backend using Entity Framework Core and SQL Server.

BookTracker (in development)

Reading tracker that lets users save books, track their current page, and log reading entries with page ranges and summaries to build reading comprehension. Built with a React and TypeScript frontend (Vite, React Router) that pulls book data from the Open Library API, and an ASP.NET Core Web API backend using Entity Framework Core.
